Java

```java
class Solution {
    public int shareCandies(int[] candies, int k) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[]} candies
 * @param {number} k
 * @return {number}
 */
var shareCandies = function(candies, k) {

};
```

TypeScript

```typescript
function shareCandies(candies: number[], k: number): number {

};
```

C++

```cpp
class Solution {
```

```cpp
public:
    int shareCandies(vector<int>& candies, int k) {

    }
};
```

C#

```csharp
public class Solution {
    public int ShareCandies(int[] candies, int k) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun shareCandies(candies: IntArray, k: Int): Int {

    }
}
```

Go

```go
func shareCandies(candies []int, k int) int {

}
```
